### RESEARCH VISION

---

I envision that we will be able to exploit satellite observations to understand and predict unobserved atmospheric processes through advanced data assimilation. I contributed towards this vision by studying the assimilation of satellite and radar observations, leveraging the synergistic benefit of multiple satellite channels, and analyzing the consequences of violated assumptions by nonlinear observation operators.

### WORK / RESEARCH POSITIONS

---

- |           |   |            |
|-----------|---|------------|
| 03/2020 - | <b>University Assistant (Doctoral Research Assistant)</b>   | Vienna, AT |
| 04/2024   | Department of Meteorology and Geophysics, University of Vienna  |            |
|           | <ul style="list-style-type: none"><li>• Research on the topic "All-sky assimilation of visible and infrared satellite observations for convective-scale numerical weather prediction"</li><li>• Teaching of Bachelor and Master tutorials (see Teaching section)</li></ul>  |            |
| 10/2017 - | <b>Assistant Model Developer</b>  | Vienna, AT |
| 08/2019   | UBIMET GmbH (private weather service)   |            |
|           | <ul style="list-style-type: none"><li>• Taking care of continuously running forecast models from a software and meteorological perspective</li><li>• Experiments for improving the used parametrizations and source-code development for the land-surface-model parametrization</li><li>• Developing data-driven blending methods of forecast models</li><li>• Rewriting legacy code in python to improve the speed of execution</li><li>• Providing code to handle large data volumes for the most used file formats in python for plotting, verification, analytics</li></ul> |            |

### EDUCATION

---

- |           |   |            |
|-----------|---|------------|
| 03/2020 - | <b>PhD Meteorology (Dr.rer.nat)</b>   | Vienna, AT |
| 04/2024   | Department of Meteorology and Geophysics, University of Vienna  |            |
|           | Topic: "Data assimilation of cloud-affected satellite observations for convective-scale numerical weather prediction" |            |
| 10/2017 - | <b>MSc Meteorology</b>  | Vienna, AT |
| 01/2020   | Department of Meteorology and Geophysics, University of Vienna  |            |
|           | Thesis topic: Added Value of Machine Learning in Forecasting Wind Turbine Icing                                       |            |
| 10/2013 - | <b>BSc Meteorology</b>  | Vienna, AT |
| 09/2017   | Department of Meteorology and Geophysics, University of Vienna  |            |
|           | Thesis topic: Parameterizing the asphalt surface temperature (in German)  |            |

## CONFERENCE PRESENTATIONS

---

- 06/2024 Online International Symposium on Data Assimilation, (online)  
Talk: *Ambiguity and nonlinearity in the assimilation of visible and infrared observations*
- 10/2023 International Symposium on Data Assimilation, Bologna, Italy  
Talk: *Comparing the assimilation of visible and infrared satellite observations to radar reflectivity for convective-scale numerical weather prediction*
- 05/2023 Meeting of the Austrian Meteorological Society, Innsbruck, AT  
Poster: *The potential impact of assimilating cloud-affected visible and infrared satellite observations for convective-scale numerical weather prediction*
- 04/2023 General Assembly of the European Geosciences Union, Vienna, AT  
Talk: *Assimilating cloud-affected visible & infrared satellite observations in idealized simulations*
- 06/2022 International Symposium on Data Assimilation, Fort Collins, CO, USA  
Talk: *Assimilating visible & infrared satellite observations for convective scale NWP*
- 05/2022 General Assembly of the European Geosciences Union, Vienna, AT  
Talk: *Assimilating visible & infrared satellite observations for convective scale NWP*
- 11/2019 1st Artificial Intelligence for Copernicus workshop, Reading, UK  
Invited talk: *Machine learning techniques for high-impact-weather (flood forecasts)*
- 09/2019 Workshop of the European Summer of Weather Code (ESoWC), Reading, UK  
Invited talk: *Machine learning techniques for high-impact-weather (flood forecasts)*

## PUBLICATIONS (incl. manuscripts)

Weissmann (2023): Potential impact of all-sky assimilation of visible and infrared satellite observations compared to radar reflectivity for convective-scale NWP, doi:[10.1002/qj.4577](https://doi.org/10.1002/qj.4577) Quarterly Journal of the Royal Meteorological Society.

**Kugler L.** (2019): The Added Value of Machine Learning in Forecasting Wind Turbine Icing, (MSc Thesis), doi:[10.25365/thesis.60595](https://doi.org/10.25365/thesis.60595), University of Vienna.

## TEACHING EXPERIENCE

---

Summer 2021 - Summer 2022	<b>“Physical Concepts”</b> , Bachelor Meteorology, University of Vienna The course covered the basics of thermodynamics, radiation and hydrodynamics and was conducted for students of Meteorology and Astronomy as a collaboration between the Department for Meteorology and the Department for Astrophysics
Winter 2022	<b>“Dynamics of the Atmosphere”</b> , Bachelor Meteorology, University of Vienna The course covered fundamental forces, equations of motion in various coordinates, approximations to the equations, vorticity equation, atmospheric waves.
Summer 2023	<b>“Advanced Data Assimilation”</b> , Master Meteorology, University of Vienna I pioneered a hands-on course where students could learn concepts of data assimilation with practical examples using the Data Assimilation Research Testbed (DART) and forecast data from the Weather Research and Forecasting Model (WRF). The course introduced DART, WRF and covered Bayes theorem, forecast verification, sequential assimilation, localization, inflation, overfitting of observations and the theoretical optimum for spread.

## AWARDS

---

09/2019	<b>Awardee of the ESoWC challenge</b> Our two-person team was awarded € 5k in a challenge hosted by ECMWF-Copernicus for developing and disseminating Machine Learning river flood forecast models trained on ERA5 reanalysis data	Reading, UK
---------	---	-------------

## PROGRAMMING

---

- **Programming languages, etc:** Python, Fortran, Bash, Matlab, Git, LaTeX
- **HPC knowledge/skills** from various HPC systems; for speed-up and efficiency of code using MPI (python/Fortran) and OpenMP; learned through experience, semester-long elective courses “Computer Architecture and High Performance Computing”, “Databases and Visualization”, “Algorithms and Data Structures”, and PRACE HPC workshops in Barcelona and Amsterdam (2018)
- **Open-source software projects:**  
[DART-WRF](#): Digital lab for observing-system simulation experiments with WRF, DART and RTTOV  
[RTTOV-WRF](#): Simulate SEVIRI satellite channels from WRF output  
[ml\\_flood](#): Demonstrator and tutorial for ML in river flood forecasting and other projects

## OTHER

---

- **Languages:** German (native), English (C2)
- **Citizenship:** Austrian
